# About Us

At Ridge Woodworking LLC we take pride in our structures.

Our team of skilled craftsman hand select and visually inspect every board to ensure that only the highest quality and visually attractive boards are used in the manufacturing process. After inspection, the material goes through a prep phase which includes surfacing, sanding, and molding to a consistent size. The boards are then cut to size and the assembly process begins. Once each structure is completely assembled a visual checklist is gone through to ensure the product meets our standard of construction. Since we control the entire process from the selection of the raw materials to installation we are better able to provide you with the highest quality product..

More than 20 years ago Ridge Woodworking was founded on Integrity, Honesty, and Customer service. Today more than ever we still hold those values as fundamentals of our company.
